Andrew B. Smitherman, MD, MSc
Assistant Professor and Medical Director, UNC Adolescents and Young Adults (AYA) Oncology Program

**Specialty:** Pediatric Hematology-Oncology

**Procedures and Research:** Use of biomarkers of aging for the early identification of treatment-related morbidities. Stemming from combined training in Internal Medicine, Pediatrics, and Pediatric Hematology-Oncology, I have developed clinical and research interests in providing and improving cancer care for adolescents and young adults (AYAs) as well as survivors of childhood, adolescent, and young adult cancers. Supported by a St. Baldrick’s Fellowship and using analyses of administrative databases, I have examined the patterns of healthcare usage among survivors to characterize emerging chronic treatment-related morbidities. Building on this work with the support of an NCTraCS career development award, I have plans to identify biomarkers predictive of these morbidities through prospective cohort studies.

**Special Interests:** Improving cancer care for adolescents and young adults (AYAs) as well as survivors of childhood, adolescent and young adult cancers

**Medical School:** East Carolina University
**Honors:** Member, Alpha Omega Alpha

**Residency and Chief Residency:** University of North Carolina Hospitals
**Area:** Internal Medicine and Pediatrics
**Honors:** Chief Resident in Pediatrics, 2011-2012

**Fellowship:** University of North Carolina at Chapel Hill
**Area:** Pediatric Hematology/Oncology
**Honors:** Saint Baldrick’s Fellow

**Bachelor of Arts:** Davidson College
**Area:** Religious Studies

**Certifications:** Internal Medicine, Pediatrics, Pediatrics-Pediatric Hematology-Oncology
Michael Vincent (Mike) Winstead, MD  
Assistant Professor of Pediatrics

**Specialty:** Pediatric Hematology-Oncology

**Procedures and Research:** My main research interests are immune function after stem cell transplantation (SCT) and the impact of T-cell recovery on quality of life and graft-versus-host disease (GVHD). The T-lymphocyte population contains functionally distinct subpopulations whose interactions maintain immune homeostasis. Delineating the roles of distinct T-cell subtypes after transplantation may allow better prevention and control of transplant complications like GVHD and infection. My ongoing research involves the association between gamma-delta (GD) T-cell diversity and severity of GVHD. The recovery of GD cells is generally associated with favorable outcomes after transplantation, but the diversity of GD cells is not well explored, nor is the relationship between GD diversity and GVHD severity. Ideally this research will fit into a larger understanding of immune regulation in SCT recipients, particularly those with baseline immune dysregulation, for example patients with immunodeficiencies and sickle cell disease.

**Special Interests:** Blood disorders, bone marrow failure, hemoglobin disorders, bone marrow/stem cell transplantation

**Medical School:** University of Illinois at Chicago

**Residency:** University of New Mexico  
**Area:** Pediatrics

**Fellowship:** Children's Hospital of Pittsburgh  
**Area:** Pediatric blood and marrow transplantation

**Fellowship:** University of California, San Francisco  
**Area:** Pediatric hematology and oncology

**Certifications:** Pediatrics, Pediatrics-Pediatric Hematology-Oncology
Pediatric Urology and Urologic Surgery
